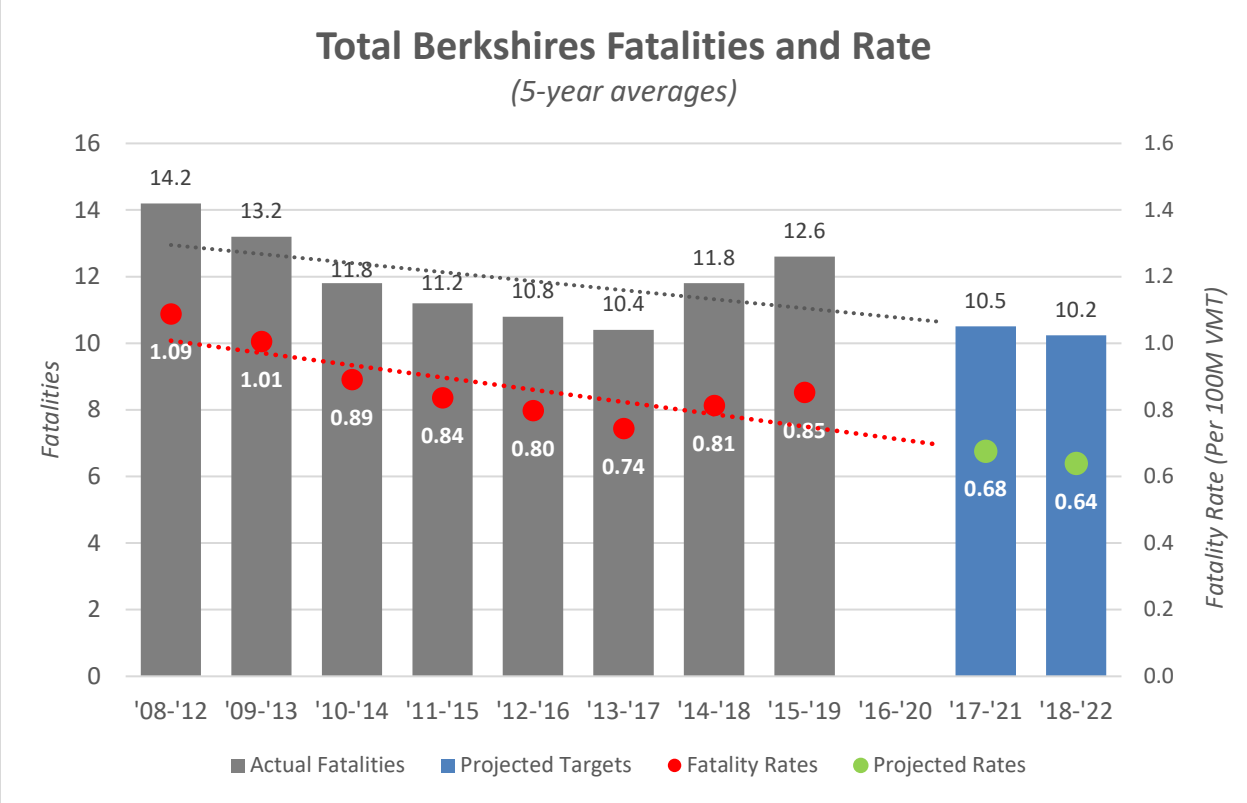
CY22 Safety Performance Measure Targets (PM1) Berkshire Comparison

Total Fatalities: The Berkshires' average total road fatailities is trending downward generally, as illustrated by the black dotted trend line. The past two years of full data (up to 2019) show an average increase of about 1 fatality per year. The projections of 5-year averages shown for 2017-2021 and 2018-2022 (blue bars) are based on a target of no increase in the forthcoming year and following the linear trend previously established.

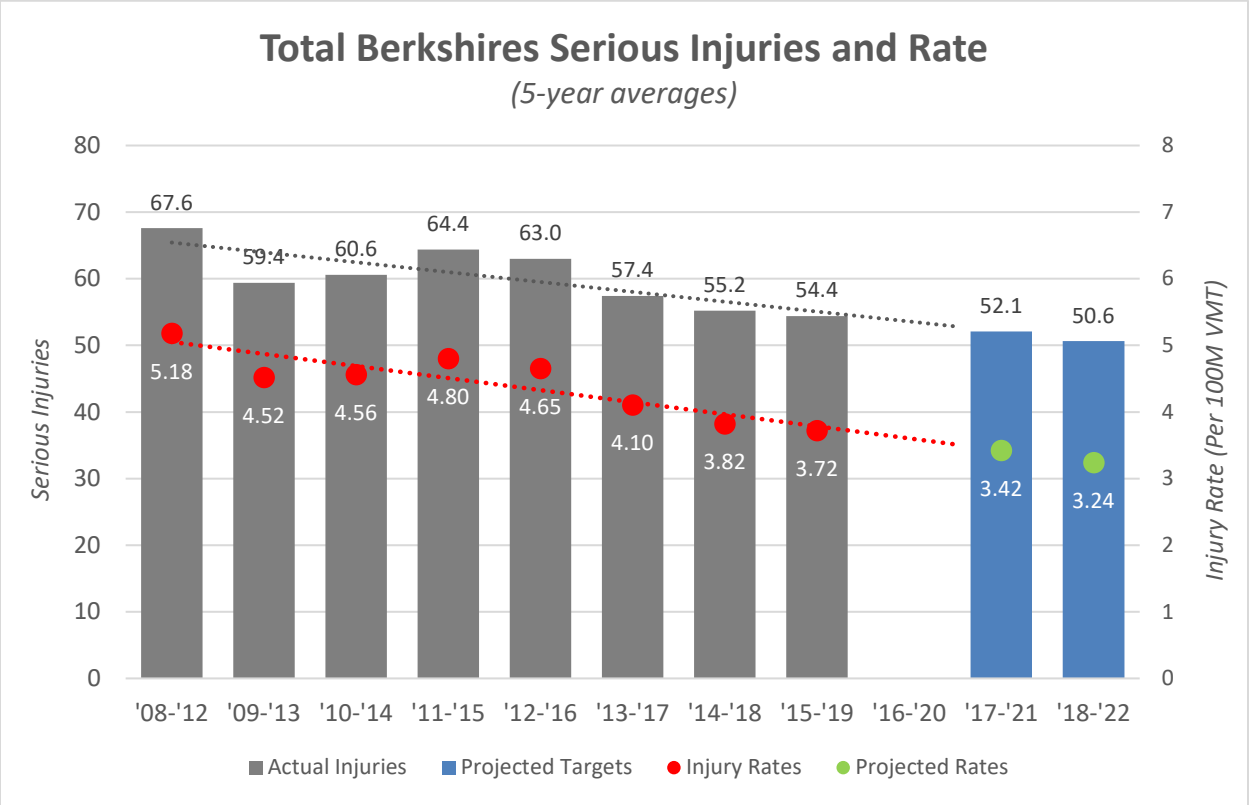
Fatality Rate: The fatality rate per 100 million VMT (red data points) tracks with the number of actual fatalities. While the rate in general is decreasing as illustrated by the red dotted trend line, the previous two full years of data show a rate increase. The rate in general per 100 million VMT is higher than the state average. The projections for the 2017-2021 and 2018-2022 five-year average rates (green points) are based on a target of no increase and following the linear trend previously established.



CY22 Safety Performance Measure Targets (PM1) Berkshire Comparison

Total Serious Injuries: Berkshire County follows the declining trend of the statewide serious injury statistic. We anticipate and project that this trend will continue and the targets that are set reflect that projection.

Serious Injuries Rate: Our 5-year average injury rate per 100 million VMT also continues to track below the state statistic in general. A continued decline is projected and targeted for the 5-year averages of 2017-2021 and 2018-2022.



CY22 Safety Performance Measure Targets (PM1) Berkshire Comparison

Total Number of Non-Motorized Fatalities and Serious Injuries: The combined statistic of fatilies and serious injuries for non-motorized travel includes pedestrians and cyclists in transit within the right-of-way. The number continues to fluctuate for Berkshire County. Fatailites have held at either 2 or 3 per year since 2010. Injuries, however, continue to rise which pushes the statistic higher.
